

PSK 107 – Philosophy of Science

Assignment 2

Deadline: 05.12.2016

You are a curious journalist and interested in scientific developments. One day, while you are scrolling down on your Facebook timeline, you see a news stating that a college student found out that a very much trusted scientific theory, which you totally believe in as everyone else, is actually all wrong!

After you read the college student's status, you realize that this is an important paradigm shift and you have to report it in your journal...

You are expected to write an article as a journalist! As for the new theory of the college student, you can choose any scientific theory, and change it to create a scientific revolution (Feel free on how to develop that new theory, it doesn't have to make sense, just be creative! Free press, you know! ☺).

Most importantly, while writing your article you should consider Popper's and Kuhn's views on scientific knowledge and the progress of science. State your opinions about this new theory via comparing & contrasting Popper & Kuhn.

Enjoy!

Structure:

Font type: Times New Roman

Font size: 12

Line spacing: 1.5
